DETAILED ACTION

Allowable Subject Matter

1. Claims 1 – 2 and 4 – 8 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Lee et al. (US 6,476,799 B1) teach an apparatus provided for the wireless capture of coordinate-shift information. The apparatus includes a pulse generation that generates a pulse signal and simultaneously distributes the pulse signal into a first signal along the first path and a second signal along the second path.

Oda (US 5,646,377) teaches a method for providing coordinate information which is indicated by a pointing device. The point detecting device transmits signals from both ends of the loop coil arrangement towards the pointing device, and/or receives at both ends the signals generated by the electromagnetic function between the loop coil arrangements and pointing device.

Wieczorek teaches a cordless position detection apparatus comprising a plurality of coils running along the x-direction and y-directions and continuously generates a square wave pulses wherein the frequency of a resonant signal produced from a pen circuit is different from the frequency of the transmitted electromagnetic waves

But none of the prior art of reference teaches a (RX+) terminal for receiving signals connects with ends of first and second parallel resistors (R1 and R2), the other end of the second resistor (R2) connects with a negative input pin (2) of a first amplifier (IC12A) and one end of a third resistor (R3) in parallel, and the other end of the third resistor (R3) connects with an output pin (1) of the first amplifier (IC12A), a first pin (12) of an amplifying circuit chip (IC 14) and one end of a fourth resistor (R6); a grounding pin (4) of the first amplifier (IC 12A) is connected to analogue ground; the other end of the first resistor (R1) connects with one end of a fifth resistor (R4), a first capacitor (C6) and a reference voltage terminal; the other end of the fifth resistor (R4) connects with a positive input pin (3) of the first amplifier (IC 12A), the other end of the first capacitor (C6) is connected to analogue ground and one end of a second capacitor (C7), the other end of the second capacitor (C7) connects with a power supply connection pin (8) of the first amplifier (IC 12A) and a first power supply (VDD); the other end of the fourth resistor (R6) connects with a second pin (13) of said chip (IC14) and one end of a sixth resistor (R7); the other end of the sixth resistor (R7) connects with a third pin 14 of said chip (IC14) and one end of a seventh resistor (R8); the other end of the seventh resistor (R8) connects with a fourth pin (15) of said chip (IC 14) and one end of an eighth resistor (R9); the other end of the eighth resistor (R9) connects with a fifth pin (1) of said chip (IC14) and one end of a ninth resistor (R10); the other end of the ninth resistor (R10) connects with a sixth pin (2) of said chip (IC 14) and one end of a tenth resistor (R11); the other end of the

tenth resistor (R11) connects with a seventh pin (4) of said chip (IC14) and one end of an eleventh resistor (R12); the other end of the eleventh resistor (R12) connects with an eighth pin (5) of said chip (IC14) and one end of a twelfth resistor (R13); the other end of the twelfth resistor (R13) connects with a reference voltage terminal; a ninth pin (3) of said chip (IC 14) connects with one end of a third capacitor (C 1), the other end of the third capacitor (C 1) connects with one end of a thirteenth resistor (R16) and a positive input pin (5) of a second amplifier (IC12B); the other end of the thirteenth resistor (R16) connects with the reference voltage terminal; an output pin (7) of the second amplifier IC 12B, which outputs the output signals, connects with one end of a fourteenth resistor (R26); the other end of the fourteenth resistor (R26) connects with a negative input pin (6) of the second amplifier (IC12B) and one end of a fifteenth resistor (R23); the other end of the fifteenth resistor (R23) connects with the reference voltage terminal; a tenth pin (11) of said chip (IC14) connects with a first signal connection (GA), and an eleventh pin (10) of said chip (IC14) connects with a second signal connection (GB) and a twelfth pin (9) of said chip (IC 14) connects with a third signal connection (GC), and a thirteenth pin (16) of said chip (IC 14) connects with the first power supply (VDD) and one end of a fourth capacitor (C 14); the other end of the fourth capacitor (C 14) connects with the analogue ground, and a fourteenth pin (6), a fifteenth pin (7) and a sixteenth pin (8) of said chip (IC 14) connect with analogue ground.

Therefore, the claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
